**SURFACE PREPARATION**

Clean surfaces to receive paint thoroughly of substances, which could impair adhesion of paints, including dust, dirt, oil and grease before application of any coatings. Prepare surfaces as follows:

**WOOD:** Remove mill glaze and dust, sand smooth. Fill open joints, cracks, nail holes and other pits or depressions flush and smooth with wood filler after priming. Use wood putty to match finish paint coat. Touch up knots or sap streaks with a stain-blocking sealer before priming.

**CONCRETE PRE-CAST CONCRETE, TILT-UP:** Remove release agents, curing compounds, loose particles, efflorescence and chalk. Do not coat surfaces if moisture content or alkalinity of surface to be coated exceeds that permitted in the manufacturer’s written instructions. Prime with an alkali-resistant primer.

**PLASTER and STUCCO:** Fill hairline cracks, small holes and imperfections on surfaces with patching compound. Smooth off to match adjacent surfaces. Apply an alkali-resistant primer or wash with fresh water and neutralize high alkalinity surfaces where they occur.

**MASONRY:** Remove efflorescence and chalk. Do not coat surfaces if moisture content or alkalinity of surface to be coated exceeds that permitted in the manufacturer’s written instructions. Prime with an alkali-resistant primer.

**SHOP-PRIMED STEEL:** Solvent clean according to SSPC-SP1. Remove loose primer and rust, contaminants and foreign matter. Prime bare steel and touch up abrasions with a ferrous metal primer.
STEEL, FERROUS METAL: Remove rust, mill scale, foreign substances and shop primer. Clean according to SSPC-SP3, “Power Tool Cleaning”, or abrasive blasting cleaning according to SSPC-SP6 “Commercial Blast Cleaning” as required. Protect surface from corrosion until application of primer.

GALVANIZED METAL: Remove oils, passivators and clean entire surface with an appropriate solvent. Pre-treat with a phosphoric acid etching solution to promote adhesion of subsequently applied coatings.

PHOSPHATIZED METAL or GALVANNEALED METAL shall not be chemically etched. Clean and apply suitable metal primer.

ALUMINUM: Solvent clean according to SSPC-SP1. Remove loose surface oxidation.

GYPSUM BOARD: Remove dust and foreign matter. Fill pits flush and smooth with joint compound and where required, apply skim coat to provide the required Level of Finish.
