Environmental Product Declaration

BEHR PROTM 1100 INTERIOR PAINT

BEHRRE Paint Company

The Behr Paint Company, home to Behr Process Corporation and Masterchem Industries LLC, the makers of BEHR® and KILZ® Brands respectively, is one of the largest manufacturers and suppliers of paint, primers, stains and surface finish products to Do-it-Yourselfers and Professionals. Sustainability is the core concept of our business strategy and culture ensuring top economic, social and environmental performance. The Behr Paint Company's commitment to sustainability, quality, value and performance has driven our desire for innovation and transparency. The creation of a Life Cycle Assessment (LCA) report and Environmental Product Declarations (EDP) allows us to continually improve our operations and illustrate a complete story behind our products.

To learn more, visit behr.com and kilz.com.

Shown above: BEHR PRO[™] i100 Interior Paint is a professional-grade latex paint designed for high-turnover and price-driven environments.

In order to support comparative assertions, this EPD meets all comparability requirements stated in ISO 14025:2006. However, such differences in certain assumptions, data quality, and variability between LCA data sets may still exist. As such, caution should be exercised when evaluating EPDs from different manufacturers, as the EPD results may not be entirely comparable. Any EPD comparison must be carried out at the building level per ISO 21930 guidelines. The results of this EPD reflect an average performance by the product and its actual impacts may vary on a case-to-case basis.

According to ISO 14025 and ISO 21930:2007

This declaration is an environmental product declaration (EPD) in accordance with ISO 14025. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. <u>Exclusions</u>: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material

extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc. <u>Accuracy of Results</u>: EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact. <u>Comparability</u>: EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.

Product Definition

This Environmental Product Declaration covers Behr Process Corporation BEHR PRO[™] i100 Interior Paint Collection. BEHR PRO[™] i100 can be applied by brush, roll or spray to interior surfaces including walls, ceilings and trim.

Declared Product Description

The BEHR PRO[™] i100 Interior Paints are GREENGUARD® Gold-certified latex paints developed to provide good performance and value. These low odor and low VOC paints are production quality coatings that add a professional look. This product line includes the following sheens: PR110 Behr Pro[™] i100 Dead Flat, PR130 Behr Pro[™] i100 Eggshell, and PR170 Behr Pro[™] i100 Semi-Gloss, and is available in 1-gallon and 5-gallon size containers. These three sheens are offered in a white tint base.

Product Components Related to Life Cycle Assessment

The material composition of the paints are in the following range:

Table 1: Material composition range in % by mass for the BEHR PRO™ i100 Interior Paint product line

	Minimum [%]	Maximum [%]
Additive	1	10
Clay	1	13
Calcium carbonate	0	13
Diatomaceous earth	0	3
Nepheline syenite	0	5
pH buffer	0	1
Preservative	0	1
Resin	11	47
Rheology modifier	1	4
Surfactant	0	3
Titanium dioxide	8	16
Water	29	38

The functional unit for the study was covering and protecting 1m² of substrate for a period of 60 years (the assumed lifetime of a building), exhibiting 97% opacity after drying. The functional unit and reference flow required for the functional unit were calculated for both the market life and design life as prescribed by the PCR. Market life for interior paints is 5 years and design life is based on the quality determined by ASTM test methods for scrub resistance (ASTM D2486 - 06(2012)e1), burnish (ASTM D6736 - 08(2013)), and washability

(ASTM D4828 - 94(2012)e1). Design life reference flow and colorant quantity for paint products are shown in Table 3 and market life reference flow and colorant quantity are shown in Table 4. Results were calculated for all base and sheen formulations. For further technical information on BEHR PRO[™] i100 Interior, visit <u>behr.com</u>.

Table 2: Design life by coating type and quality designation

Coating Type	Low Quality	Mid Quality	High Quality	Alternative
Interior Paint	3 years	7 years	15 years	N/A
Exterior Paint	5 years	10 years	20 years	Warranty

Table 3: Design Life-Lifetime, reference flow, and quantity of colorant

	Lifetime (years)	Reference flow	Carbon black input
PR110	3	2.9	0.115
PR130	7	1.07	0.0597
PR170	7	1.03	0.0602

Table 4: Market Life- Lifetime, reference flow, and quantity of colorant

	Lifetime (years) Reference flow		Carbon black input
PR110	5	1.74	0.0746
PR130	5	1.49	0.0767
PR170	5	1.44	0.0772

Scope and Boundaries of the Life Cycle Assessment

System Boundaries

The LCA was performed according to ISO 14040 standards. The system is a cradle-to-grave LCA and includes the following modules as defined in the PCR. The declaration covers the full range of Behr Pro[™] i100 sold in the North American market for the reference year.

ENVIRONMENTAL PRODUCT DECLARATION

Figure 1: System boundaries for cradle to grave LCA

Assumptions

The described modeling approach makes assumptions in order to represent the cradle-to-grave environmental performance of Behr paint products. These assumptions include those that are prescribed by the PCR, such as in packaging disposal and recovery treatment, as well as transportation distances and use phase assumptions.

Cut-off Criteria

No cut-off criteria are defined by this study. For processes within the system boundary, all available energy and material flow data have been included in the model.

Data Quality

Primary data were obtained from Behr's eight facilities, one each in Chicago Heights, IL; Allentown, PA; St. Louis, MO; Roanoke, TX; and Atlanta, GA; and three in Santa Ana, CA for the 2016 reference year. Background data were obtained from the GaBi 2017 database and are representative of the years 2007-2016. Overall, both primary and background data are representative of the product system and have been deemed very good quality.

According to ISO 14025

Allocation

Manufacturing inputs for the eight facilities were allocated to each paint product by mass.

Product Stage

BEHR PRO[™] i100 Interior Paints are produced at Behr's production facilities according to the following processing steps.

Design and Construction Stage

The design and construction stage begins with the packaged paint product leaving the production site and ends with the coating being delivered to the point of application. Within this stage, the paint product is modeled as distributed to a warehouse and from there to Home Depot stores. At the stores, it is purchased and transported to the point of application. This stage also includes the addition of colorant, represented by carbon black, at the point of sale, per the PCR.

According to ISO 14025

Use and Maintenance Stage

Application and Use

The use stage begins when the user applies the product to a substrate. Environmental burdens associated with repaints are attributed to the original stage in which they occurred (e.g. production of the coating for the repaint is attributed to Stage 1 - Product). This stage does not require any energy or additional cleaning inputs, but includes the VOCs emitted during application. The BEHR PRO[™] i100 Interior Paints are low VOC coatings, which is a designation applicable to products with less than fifty grams of VOC emissions per liter of paint, based on the ANSI/ASHRAE Standard 62. 1-2007 test method.

Health, Safety, and Environmental Aspects during Installation

Customers obtain material from a store or have the store deliver it. The customer or their contractor applies the coating to substrate(s) at customer site(s). The coating remains on the substrate material until the substrate is disposed of. This may include up to a 60 year life time, with additional /subsequent protective coatings. If the coating is handled and applied using the recommendations in the safety data sheet and technical data sheet, minimal health and environmental impacts should occur, and maximum product and substrate life should be expected.

Waste

Disposal of any leftover coating and discarded packaging is categorized under the end-of-life stage. A 10% paint loss rate during application was included per the PCR.

Packaging

BEHR PRO[™] i100 Interior Paint Collection is available in 1-gallon and 5-gallon containers. The 1-gallon container is made from 100% post-consumer plastic.

End of Life Stage

Recycling or Reuse

Home Depot stores encourage customers to use PaintCare or local paint recycling programs.

Unused Materials

According to ISO 14025

The manufacturing facilities recycle materials and by-products. The Chicago Heights, Atlanta, Garry, and Roanoke facilities also send off-spec products to GDB International, an organization that recycles paint waste into paint products.

Disposal

Product end-of-life occurs with the disposal of the substrate material. 100% of the waste is disposed of in a landfill at the end-of-life stage, and cannot be separated from the substrate before disposal. Packaging is recovered at a rate of 9.5% for plastics, 33% for metals, and 65% for paper and corrugate material. Recovery rates represent the average fraction of generated waste that is recovered in the US.

According to ISO 14025

Life Cycle Impact Assessment

In accordance to the guiding PCR, TRACI 2.1 impact characterization methodology is used to calculate the declared environmental impacts, except for global warming potential results, which follow the methodology in the IPCC 5th assessment report. Additional inventory metrics are also calculated per the guiding PCR. The declared impacts and inventory metrics are summarized in this section.

Key Environmental Parameters

Impact Assessment Interpretation

For the BEHR PRO[™] i100 Interior Paint & Primer products, raw materials and manufacturing (Stage 1) are the highest contributors to all impact categories. The impact from the design and construction stage is small but not insignificant and can be mostly attributed to transportation.

BEHR PRO™ i100 Interior Paint & Primer

According to ISO 14025

Other Environmental Information

GREENGUARD® Certification

BEHR PRO[™] i100 Interior Paint Collection is GREENGUARD[®] and GREENGUARD[®] Gold Certified. This third-party certification assures our paints are low-emitting and contribute to healthy indoor environments.

GREENGUARD Certification establishes acceptable indoor air standards for indoor products, environments, and buildings. GREENGUARD Gold Certification offers stricter certification criteria, considers safety factors to account for sensitive individuals (such as children and the elderly), and ensures that a product is acceptable for use in environments such as schools and healthcare facilities.

GREENGUARD certified products are referenced standards in numerous sustainable building initiatives including: Leadership in Energy and Environmental Design (LEED[®]), Collaborative for High Performance Schools (CHPS), Green Guide for Health Care (GGHC), Sustainable Building Industry Council (SBIC) and many others. For more information on the GREENGUARD Certification Program emission standards visit greenguard.org.

MPI Extreme Green Performance[™] Standard (MPI GPS-2-12)

BEHR PRO[™] i100 Interior Paint Collection is certified with the MPI Extreme Green Performance[™] (X-Green) Standard, a three-pronged standard that has requirements on indoor air quality, durability, and environmental safety of paint products.

MPI's Green Performance[™] Standards were established to challenge the thinking that VOC level alone should determine a 'green' coating. MPI believes that performance and durability are critical to true sustainability, since premature failure and the frequent repainting that results inevitably leads to greater VOC emissions and non-sustainable and costly maintenance operations. Therefore, paints certified to MPI's Green Performance[™] Standard:

1) Provide performance and durability equal to their 'conventional' counterparts;

2) Have eliminated or contain only trace quantities of various undesirable chemical compounds such as phthalates;

3) Have reduced VOC. MPI's GPS 2 -- the most stringent in North America when introduced in 2007 -- has a maximum allowable VOC of 50 g/l across the board for all paint types.

The Extreme Green Environmental Performance[™] Standard, which complements MPI's Green Performance[™] Standards includes the following additional requirements:

- 1) No carcinogenic ingredients;
- 2) Maximum 50 g/l VOC;

3) Submit a third-party test result verifying they meet CHPS (Collaborative for High Performance Schools) emissions requirements;

4) The certification of emissions compliance to CHPS must be within 2 years of testing.

The MPI Green Performance[™] Standard is the only green paint/coatings certification required by both the US and Canadian governments, and referenced by the South Coast Air Quality Management District (SCAQMD).

According to ISO 14025
