EXCELLENT ADHESION TO TOUGH-TO-PAINT SURFACES

NO. L2111

PRODUCT INFORMATION

KILZ® Adhesion Primer is a water-base, modified-acrylic primer specifically formulated to bond to a variety of ‘tough-to-paint’ surfaces. Its advanced chemistry provides a sound anchor for topcoats while reducing or potentially eliminating the need for sanding dense, glossy surfaces including Kynar®, PVC, vinyl, Formica®, glass, tile, glazed brick, chalky paints, glossy finishes, fiberglass and metals. If using as a primer for epoxies, lacquers, products containing xylene or other hot solvents, allow to dry for 24 hours before topcoating and test for compatibility in an inconspicuous area before full coat application. For use on interior and exterior surfaces. Not recommended for floors or horizontal surfaces subject to prolonged water contact.

SURFACE PREPARATION:

All surfaces must be clean, dry and free of oil, grease, mildew, wax, dust, flaky rust, mill scale, loose paint, chalk and other foreign matter that could interfere with adhesion.

Wash: If washing is necessary, use a non-soapy detergent or a TSP substitute, rinse well and allow to dry.

Remove loose rust, peeling paint and mill scale with a scraper, wire brush or sandpaper. Clean bare metal in accordance with SPC (The Society for Protective Coatings) specifications for the proper surface preparation of metal surfaces.

Peeling or Checked Paint: Scrape off loose paint and sand to a smooth surface. Sanding or removal of paint containing lead is hazardous.

While KILZ Adhesion Interior/Exterior Water-Based Bonding Primer is formulated to bond without sanding, it is recommended that a small area be tested for adhesion prior to beginning the job.

‘WARNING!’ If you scrape, sand or remove old paint, you may release lead dust. LEAD IS TOXIC. Contact the National Lead Information Center at 1-800-424-LEAD or visit www.epa.gov/lead.
