

Project Skill Level: Intermediate DIY'er

For Best Results

To promote adhesion and durability of your topcoat, use a PREMIUM PLUS® primer. Not interested in applying a primer? Consider using PREMIUM PLUS ULTRA® products—innovatively developed as a paint and primer in one.

The Window Frame

Step 1

Begin your painting project by pouring thoroughly mixed paint into a bucket and dipping a quality 2"–2½" wide nylon/polyester brush into the paint.

TIP: When working outside, it is best to work out of direct sunlight and in temperatures between 50°–90° F with moderate humidity.

Step 2

With your brush, begin painting the inside frame of the window starting at the top.

TIP: To avoid drips, tap off the excess paint against the inside wall of the bucket.

Step 3

Continue until the inside frame is complete. Let it dry.

TIP: Reload the brush when necessary to maintain a wet edge.

The Window Sash

Step 1

Raise the lower sash and drop the upper sash.

Step 2

With your brush, paint the upper sash beginning with the crossbar.

Step 3

Continue to the lower sash beginning with the crossbar. Repeat the process with the obstructed sash areas.

TIP: Do not brush the top edge or the bottom edge of the window sash as they will be used to raise and lower the sash.

Step 4

Paint the window casing and sills. Let them dry.

TIP: For optimum results in quality of color and finish, apply a second coat.

The Window Trim

Step 1

Starting at a top corner of the window trim, paint the side edge of the trim where it meets the wall. Continue until all side edges of the trim are complete.

TIP: Reload the brush when necessary to maintain a wet edge.

Step 2

Return to the top of the window trim and begin painting the face of the trim.

Step 3

Continue until the window trim is complete.

Colors Used: Pelican Bay ECC-30-1 (Window), Windy Seas ECC-31-1 (Frame & Trim)
