

## Project Skill Level: Intermediate DIY'er

### Start with a base color...

A Faux Finish is easily created by applying one or more colored glazes over a new or existing base color. Interested in using your existing surface color as the base color? No problem, as long as it is in good condition. If you're choosing a new base color, we recommend PREMIUM PLUS® Interior Paint in a Flat, Eggshell, Satin, or Semi-Gloss Enamel sheen.

### Step 1

To prepare your topcoat glaze color, pour 1 part PREMIUM PLUS® paint and 4 parts FAUX GLAZE into a bucket and mix the contents thoroughly. For a more see-through or transparent look, add extra faux glaze to the mixture. For a denser or more opaque glaze color, add more paint to the mixture. The mixture will generally cover approximately 400 sq. ft.

**TIP:** Mix the entire quantity of glazing color needed for the project before you start painting. Combining the contents produces uniformity in color. This intermixing is called "boxing."

### Step 2

Pour your color glaze mixture into a paint tray and work a 6" mini roller into the glaze until it is fully loaded. To remove excess glaze, roll the tool on the ribbed area of the paint tray.

**TIP:** Test your technique and color combinations on a practice board before you begin the project.

### Step 3

Cut plastic sheeting into squares that are slightly smaller than 3' x 3'. Starting at a top corner of your project, roll the colored glaze onto a 3' x 3' section. Allow the glaze to set for 1 to 2 minutes.

### Step 4

Scrunch up the plastic in your hands. Then, stretch it out and lay it gently over the wet colored glaze. Leave a wet edge.

### Step 5

Using a BELLAGIO FAUX™ Brush, very softly brush over the plastic. Leave some wrinkles and overlapping. Avoid pressing with your fingers as this leaves finger marks.

**TIP:** The wrinkles in the plastic create your effect.

**Step 6**

Leaving the plastic sheet in place, roll the colored glaze onto another section. Overlap it with the wet edge of the previous section. Apply a scrunched and stretched sheet of plastic onto this new wet area and repeat the process.

**Step 7**

Once the entire surface is covered, carefully peel away each of the plastic sheets to reveal the design.

**Step 8**

Repeat the process until the project is complete.

Colors Used: Base Color: Wine Tasting S-H-110, Glaze Color: Stealth Jet 780F-7
